Hello Dominik,

I hope you and your family are doing well.

To complete your project smoothly, I will need the backend credentials. Specifically, I need access of a Hosting server to test and connect the APIs with the frontend. This step is important because coordinating the frontend and backend takes time.

My main goal is to complete your project on time and ensure all issues are solved properly before delivery.

Please see the details below regarding Hosting and SMTP server setup:
Resources Required to Complete the Backend Phase

1. SMTP Server Details

- Required to configure automated e-m-ails for user registration and password reset functionalities.
- If you prefer to handle registration and password reset manually, SMTP setup is not necessary.
- If your expected e-m-ail volume exceeds 500 e-m-ails/day, we recommend pu-rc-ha-sing an SMTP E-m-ail Pl-an from Hostinger. The appropriate pl-an should be selected based on your company's customer volume.

For reference:

2. Hostinger Access

- Based on my experience, I recommend using Hostinger for hosting.
- I suggest the KVM 4 VPS pl-an for faster response times.
You can see from here: https://www.hostinger.com/vps-hosting

Upon your confirmation, we can begin API development immediately.
If you have any questions, suggestions, or concerns outside of these requirements, please let me know, and I will get back to you promptly.

Best regards,

Purchase your business email plan
